EndoRun walk to raises awareness about Endometriosis

With the objective of raising awareness about endometriosis, a medical condition that afflicts several women, a walk was organised under EndoRun initiative at Phoenix City Lane 1 in Vimanagar from 6:30 am to 8:30 am on March 26. As many as 65 people took part in the event, which aimed at expressing solidarity with women suffering from the ailment. The walk was led by Khushboo Sharma, Project Lead of Women's Health at PAIR Academy. Dr. Amol Lunkad, a renowned gynecologist, spoke about endometriosis and its effects on women's health.

ABOUT US

INTRODUCTION

"**Women with Wings**" is an initiative of "**The Patient Academy for Innovation and Research**" dedicated to women's health providing a safe and supportive space for women to come together to share their stories, discuss their experiences, and find help and understanding.

We strive to disseminate accurate information, education, and support to those living with the conditions which are under-highlighted.

1/10 women are likely to suffer from endometriosis, yet **the delay between onset to diagnosis can be as late as 7- 10 years**. Most patients suffer from excruciating pain and other debilitating effects that hamper their day-to-day activities and adversely affect their quality of life. Our work has resulted in providing a safe platform for women to meet discuss their challenges and work towards effective solutions.

BACKGROUND

Women with wings (WWW) organises pan India events with volunteers and likeminded individuals to raise awareness around Endometriosis.

EndoRun brought together survivors and their families, healthcare providers, researchers, and advocates, to walk for a shared cause.

The goal of this event is to raise awareness about endometriosis, spark a National conversation around the condition, and call for greater support and resources for the individuals and families affected by it.
